Add coleccion interlockos 2d senonimo del porno con titulares de ingeniero This leads to an analytical description of the physiology of the perfused lung in terms of elements of fluid mechanics, which may be described by a resistance-capacitance model. Surrogates for the complex, non-linear process of drug absorption, distribution, metabolism, and elimination, which underlie the systemic response to drug exposure, have been developed and validated by a number of research groups. The effects of a single drug on a population of cells may be described by a drug-dependent and drug-independent probability of cell death. To characterise this highly non-linear process, the simple Hill function has been used by many groups, but there is increasing interest in the development of other classes of function. A more sophisticated approach has been based on a computational fluid dynamic model of the lung, in which the cells and blood are modelled as fluids with defined properties and non-linear equations that describe the flow of mass and momentum.
