not working dkelly: you mean you cant connect to a vnc session on the current machine? it's not working. I tried both "tightvnc" and "realvnc" dkelly: maybe an #raspberrypi channel might know? I tried both "tightvnc" and "realvnc" on both machines. They work fine on one machine, but not the other. The other machine is a rasbian 9.1 box with xfce4 dkelly: wich ubuntu version are you on? ubuntu 16.04.3 xfce, x11vnc, tightvnc and realvnc dkelly: try x11vnc perhaps, its default on xfce no dice. I tried it on both machines with ubuntu and rasbian dkelly: can you try vnc4server on both? oh, hm, no. I don't see a vnc4server. dkelly: also, it's not quite clear that it's the same vnc server. I installed tightvnc on the same box and it worked. That one also has it listed in the auto-start apps. dkelly: x11vnc and tightvnc also work, and realvnc can be tricky to setup depending on your router/modem chipset dkelly: i would try a vnc4server on both machines, and vnc4viewer to connect the 2 I'm not seeing a vnc4server on either machine. I didn't see an "auto-start apps" list on the rasbian box, but I do see it on the ubuntu machine. there's an icon in the xfce taskbar that says "VNC viewer" f3e1b3768c
