Windows Vista 64-bit asdd.com.au A: The Aspire 5100 series is Acer's newest gaming laptop. There is no entry of any sort on the web that tells me that it is Windows 7 compatible. I know because I looked. There are several notebooks out there which are Windows 7 compatible (as in you can install it on it) but will not boot at all. I am pretty sure the Aspire 5100 series is one of them. According to Acer's own webpage (Acer Aspire 5100 series) the Aspire 5100 is manufactured on Mar. 27, 2010. It has a "model number" "AS10H" which is either the model or the name of the series. The laptop has no model number on the bottom of the laptop. The system has a processor that runs at 2.2 GHz and a GPU that has "Billion Master" or "Dual Graphics Chipset Technology". Also the model number "ACX-103T" (found in some tech forums) is the video card. I have contacted Acer to ask if the Aspire 5100 series is supported. If they respond, I will post an answer. Update: I have been contacted by Acer and they say that they have not released any driver updates for the Aspire 5100 series. Update: I have received the following from Acer: Dear Chris, Thanks for your inquiry. The Acer Aspire 5100 series is not Windows 7 compatible and Windows 7 is not currently available on the market. We are sorry for any inconvenience caused. If you need any other information, please feel free to let
