Has Two New Arms Enriched
Uranium: The Atomic Energy
Organization A NEW arms race has
begun in the Middle East, as Iran has
boasted to the world it is now
enriching uranium to weapons-grade
levels. Iran's new enrichment plant at
Natanz, near the central Iranian city
of Isfahan, was revealed in a TV
report. It will produce between 2 and
7kg of uranium each day, which is
enough for about four bombs. Iran
says the plant is a part of its peaceful
nuclear research programme. But

Israel and the West are outraged at the news. The spokesman for the Atomic Energy Organisation of Iran, Behrouz Kamalvandi, told state television that the new plant is 10 times more powerful than the previous facility at Isfahan. The plant was erected in defiance of UN Security Council sanctions. Mr Kamalvandi said: "We are not seeking to build a nuclear bomb. We have had this facility for the past 15 years and we have not used it for a single weapon of mass destruction. We have a civilian nuclear energy programme and we are happy with it." Speaking

on BBC World Service International Editor John Simpson said: "It will be extremely difficult for any sanctions body to enforce, as we have seen recently, a ban on the export of raw uranium. "This uranium would have to be converted into the fuel rods of a nuclear reactor, so you would need some fairly sophisticated equipment, facilities and personnel. "It is estimated that to produce a nuclear bomb you would need about one kilogram of the fuel. It would be very, very difficult to get hold of that amount of the material without someone else getting hold of it first."

Iran's President Mahmoud Ahmadinejad has defended the new plant, saying it has "nothing to do with the arms race". He added: "It was decided to establish this plant at the beginning of the year. "We did not start work until February and it is now complete." On Wednesday Iran announced it has built a new nuclear
